

## 4-dial Padlock

### How to set your own combination

#### Step 1

Make sure the dials between the arrows are set to 0-0-0-0 and pull out the shackle. You will see a small pin appear.

#### Step 2

Rotate the shackle 90 degrees counterclockwise (towards yourself) so the pin is located above a small gap.

#### Step 3

Push down the shackle (firmly) until the pin disappears into the small gap and while you keep pushing, rotate the shackle another 90 degrees counterclockwise, so the shackle remains in the down position.

#### Step 4

Set your new combination and make sure the dials are fully aligned with the arrows. When the new combination is set, rotate the shackle backwards (clockwise) until the pin pops back up. Your new combination is now set. Make sure you remember your combination or write it down and store it safely.

## 3-dial Luggage Strap

### How to set your own combination

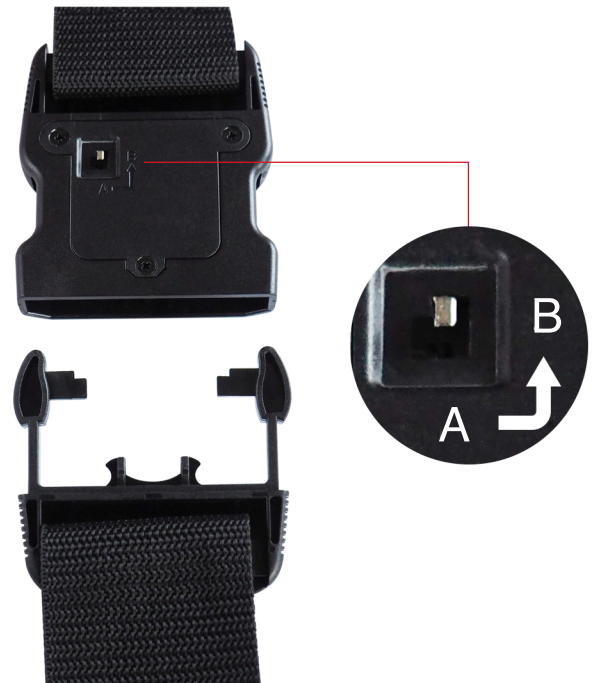

#### Step 1

Make sure the dials are set to 0-0-0 and open the luggage strap.

#### Step 2

While the strap is open, push the small button on the back from A into B. Now you can set your own combination by turning the dials.

#### Step 3

When your new combination is set, push back the small button from B into A to confirm your new combination. Make sure you remember your combination or write it down and store it safely.
